AI Made Simple — Job Hunt Prompt Library

9 tested copy-paste prompts for resumes, cover letters and interviews. Every prompt was actually run — and every AI output in this deck is real and unedited.

Watch each prompt in a 60-second Short on YouTube

Full library: GitHub + Notion (links on the last slide)

The one rule: AI improves wording — never facts

THE [BRACKET] METHOD

Every prompt here forbids invented numbers. Where a real number or personal detail belongs, the AI output uses a [bracket] placeholder instead — you replace it with your own true detail. A bullet with a number you never measured stops being editing and becomes fabrication, and it usually collapses in the interview.

HOW TO USE EACH PROMPT

1. Copy the full prompt text.
2. Paste it into your AI chat tool and swap the sample text for your own.
3. Replace every [bracket] in the output with a real detail — never submit a bracket.
4. Pick the version that is most true, not the one that sounds most impressive.

P1 — Resume Bullets That Get Interviews

Use it for: Turn a weak resume bullet into 3 strong, results-focused bullets

THE PROMPT (COPY-PASTE)

Here is a weak resume bullet from a retail sales associate: "Responsible for helping customers and handling complaints." Rewrite it into 3 strong resume bullets. Use strong action verbs and results language, but do NOT invent numbers — use [brackets] as placeholders where a number would go.

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — 3 bullets starting: "Delivered personalized customer service by identifying customer needs..." / "Resolved customer complaints and escalated complex issues..." / "Managed high-volume customer interactions..." — ending with the honest placeholder [sales/service targets] instead of a made-up percentage.

P2 — Cover Letter Opening Paragraph

Use it for: Write a confident cover letter opening from a job posting

THE PROMPT (COPY-PASTE)

Job posting (Customer Support Representative) + "Write the opening paragraph (about 60 words) of a cover letter for a candidate named Alex who has 2 years of retail customer service experience."

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — opens "Dear Hiring Manager, I am excited to apply for the Customer Support Representative position." A ~60-word opening built from the posting itself: communication skills, patience, and a customer-first approach to resolving problems.

P3 — 'Tell Me About Yourself': The 4-Sentence Formula

Use it for: Answer the most common interview opener with a clear structure

THE PROMPT (COPY-PASTE)

Give me a simple 4-sentence structure for answering "Tell me about yourself" in a job interview, then one example answer (about 70 words) for a retail worker applying for a customer support job.

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — the formula: 1) Who you are 2) What you've done 3) Your strengths 4) Why this job. Plus a worked example for a retail-to-support move, built on two years of retail customer service.

P4 — STAR Interview Answer Rewrite

Use it for: Turn a vague self-pitch into a structured STAR answer

THE PROMPT (COPY-PASTE)

Rewrite this interview answer using the STAR method. Keep it under 90 words, in first person, and label the four parts (Situation / Task / Action / Result). Do NOT invent numbers or facts — use [brackets] where a detail needs to be filled in. My answer now: "I'm a hard worker, I'm good with customers, and my manager said I was reliable."

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — Situation: the store short-staffed during [busy sale periods], checkout lines building up. Task: keep the line moving. Action: rotated between register and floor, restocked between rushes. Result: lines cleared faster — and the busiest shifts started going to this candidate.

P5 — 'Why Do You Want to Work Here?'

Use it for: Draft a specific, human answer that connects posting to experience

THE PROMPT (COPY-PASTE)

Write a draft answer (about 80 words, first person). Connect ONE specific detail from the job posting to ONE real thing from the candidate's experience. Sound like a person, not a template. Do NOT invent company facts, awards, or numbers — use [brackets]. Current answer: "I want to work at your company because it is a famous company, and I think I can grow here."

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — the posting's email-and-chat work is matched to two years of answering customers' questions in retail: the favourite part of the current job, moved to a new channel. It ends with [one true detail about this company, in your own words] — yours to fill in honestly.

P6 — 5 Smart Questions to Ask the Interviewer

Use it for: End the interview strong with grouped, thoughtful questions

THE PROMPT (COPY-PASTE)

I'm interviewing for a Customer Support Representative job tomorrow. Give me 5 smart questions to ask the interviewer at the end. Group them by topic: About the role / About the team / About success. Add a one-line note under each explaining why it works. Then name the ONE question to ask if there's only time for one, and why.

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — 5 questions grouped Role (2) / Team (2) / Success (1), each with a "why it works" note. The ONE question if time is short: "What does success look like in this role in the first 90 days?"

P7 — 'What Is Your Greatest Weakness?'

Use it for: Answer the weakness question honestly, without cliches

THE PROMPT (COPY-PASTE)

Rewrite this answer. Do NOT use cliches like "perfectionist" or "workaholic." Structure: name ONE real weakness, give a brief example at work, say what I am doing to improve it, and what has changed so far. Under 90 words, first person. Use [brackets] where a detail needs to be filled in. My answer now: "I'm a perfectionist. I just care too much and work too hard."

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — the weakness: "not asking for help soon enough." A complicated case handled alone made the customer wait. The fix: escalate early, especially on [billing or returns cases outside my training]. The progress: customers get the right answer sooner.

P8 — 'Why Are You Leaving Your Current Job?'

Use it for: Explain a job change positively, with no badmouthing

THE PROMPT (COPY-PASTE)

Rewrite this answer. Rules: never badmouth the current employer, manager, pay, or coworkers. Be grateful for one specific thing learned there. Then look forward: name what the new role offers that the current role does not. Under 80 words, first person. Use [brackets] where needed. My answer now: "My manager is terrible, the pay is bad, and there's no future there."

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — gratitude first: listening to customers and staying calm when a problem is tense. Then the forward reason: most of the current work is face-to-face, and the goal is a career in written support, by email and chat. A move made on good terms.

P9 — Interview Thank-You Email

Use it for: Send a specific, professional thank-you email within 24 hours

THE PROMPT (COPY-PASTE)

Write a thank-you email to send within 24 hours after an interview for a Customer Support Representative job. Under 120 words, not counting the subject line. Include: a clear subject line, "Dear [Interviewer's Name],", one specific topic from the interview (the team is moving more support from phone to chat), my interest restated in ONE line, and a professional sign-off as [Your Name] with [Phone number]. Do NOT invent company facts, awards, or numbers.

WHAT THE AI ACTUALLY RETURNED (UNEDITED RUN — KEY POINTS)

Real output — subject line: "Thank you — Customer Support Representative interview." The phone-to-chat shift from the interview is tied back to retail experience, interest is restated in one line, and the placeholders [Interviewer's Name], [Your Name] and [Phone number] stay honest.

How to Spot Fake Hype: A 3-Check Field Guide

Every week a new product is declared the next big thing — and nobody checks. Hype-r Report scores the hype 0-100: REAL, HALF HYPE, or FAKE. This is the method.

The problem: launch-day noise vs real demand

One-day spikes are cheap. A cute photo can trend for a day on images alone, and "selling out everywhere" often comes from the brand's own marketing. Real demand behaves differently: it leaves public traces, and it survives the gap between the launch moment and the next one — a restock, a second weekly menu, a follow-up release. Three checks separate the two.

Check 1 — A demand signal you can see without trusting the brand

Real demand leaves public traces: restock dates being announced (and then actually mattering), queues or limits per customer, resale listings at above-retail prices that actually sell, and conversation that continues after the launch-day posts stop.

If the only source for "selling out everywhere" is the brand's own marketing, treat it as unproven.

Check 2 — Is the excitement about the product, or borrowed?

A lot of "viral" products are riding a movie release, a celebrity, a season, or a bigger brand's audience. That does not make the product bad — it makes the hype borrowed. Borrowed hype fades on the bigger thing's schedule, not the product's.

In our scoring, this is the most common reason an item lands in the middle band rather than the top.

Check 3 — Does the hype survive a gap?

Hype that is still alive at a second moment — a restock, a second weekly menu, a follow-up release a month later — is behaving like demand.

So score before release, note the next scheduled moment in advance, and re-check after it. A verdict published early, with a date attached, cannot be quietly rewritten later.

The scoreboard: HYPE SCORE 0-100

REAL **70-100**	You found independent demand signals.
HALF HYPE **40-69**	A real product — with excitement running ahead of the evidence.
FAKE **0-39**	The claims fall apart in public data: invented sell-outs, staged scarcity, accounts repeating each other.

The bands never move to fit a result. Scores are fixed at publication.

The ledger so far: 10 published verdicts

Case cards

Starbucks Bearista Cup — REAL 91

Drinkware hype is easy to fake. What made this one different was structure: a staged release, a surprise-box mechanic, and a restock date that turned one drop into two separate demand events.

Dubai Chocolate — REAL 82

Demand signals visible well beyond the brand's own posts — the conversation kept going after the launch moment instead of dying with it.

Stanley Cup — HALF HYPE 58

The product itself is fine — sometimes genuinely good. What is missing is proportionality: the conversation is larger than the underlying demand.

Keep your own ledger

Being wrong in public, on a dated post, teaches you more about hype than being right in private ever will.

Publish the score early. Write down the next scheduled moment. Then re-check and publish the result — we call those follow-ups Hype Receipts. A verdict system that never revisits itself is just fortune-telling with better graphics.

Every verdict, on the record
